## PUBLIC HEALTH REPORTS.

### UNITED STATES.

#### THE DANGER AND PREVENTION OF TETANUS FROM FOURTH OF JULY WOUNDS.

[Prepared by direction of the Surgeon-General.]

By John F. Anderson, passed assistant surgeon, Public Health and Marine-Hospital Service.

For the past five years the Journal of the American Medical Association has, before each Fourth of July, pointed out in its editorial columns, the special danger of tetanus subsequent to wounds incurred in the use of blank-cartridge pistols, toy cannons, firecrackers, and other noise-producing devices. Some time after the Fourth of July, when the full effects can be counted in deaths from tetanus, loss of limbs, burns, loss of eyes and eyesight, etc., it has published as complete a list as possible of the cost to the nation in lives and injuries.

The following table, taken from the Journal,<sup>a</sup> shows the number of cases of tetanus following the celebration of the Fourth for the past five years:

Year.	Blank cartridge.	Giant cracker.	Cannon.	Firearm.	Powder, etc.	Total cases.	Total deaths.
1903.....	363	17	5	3	27	415	406
1904.....	74	18	5	1	7	105	91
1905.....	65	17	4	5	13	104	87
1906.....	54	17	1	7	10	89	75
1907.....	52	8	6	4	3	73	73
Total.....	608	77	21	20	60	786	722

The great decrease in the number of cases from 415 in 1903 to 73 in 1907 must be attributed in large measure to the campaign led by the Journal and ably seconded by the lay press for the more thorough and careful treatment of Fourth of July wounds, and especially the use of tetanus antitoxin as a prophylactic. From the table it will be seen that there have been 786 cases of tetanus, with 721 deaths, a mortality of 92 per cent of those attacked. Six hundred and eight, or 80 per cent, of these followed blank cartridge wounds. The number of cases of lockjaw following blank cartridge wounds has steadily decreased since 1903 from 363 to 52 in 1907, while the cases following other wounds have remained fairly constant. This would seem to indicate that the public is realizing the great danger from blank cartridges.

<sup>a</sup> Journal Am. Med. Assn., vol. 49, p. 655.

## DISTRIBUTION OF THE TETANUS BACILLUS.

The bacillus of tetanus, or its spore form, is found in earth, especially garden earth, stable manure, the dust of the streets, stables, and human habitations. The feces of healthy animals, such as the horse, cow, dog, and even man, may contain tetanus spores.

Verneuil considers the intestinal tract of the horse the normal habitat of the organism and, as the dust of the streets is largely horse manure, it is easy to see why wounds contaminated in any way by this dust are so liable to be followed by tetanus. Mixed infections are especially dangerous, as other organisms, especially the pus cocci, assist in the production of anaerobic conditions and prevent the leucocytes from destroying the tetanus spores, as may happen when they are inoculated into animals in pure culture.

The tetanus spore is very resistant to heat, as shown by the fact that Theobald Smith has found some strains that resist boiling for 70 minutes. The question of the presence or absence of tetanus bacilli in blank cartridges is discussed pro and con in an article in the *Journal of the American Medical Association*<sup>a</sup> and the weight of evidence is certainly in favor of the view that blank cartridges do not contain tetanus bacilli except as a rare contamination when they have been exposed to dirt. There is ample evidence that tetanus spores are present in the street dirt and thus get on the skin and clothing of the injured, and are carried into the wounds by the discharge of the pistol.

## PATHOLOGY OF TETANUS.

When tetanus spores are introduced under the skin they at once germinate, if oxygen is excluded, and begin to elaborate tetanus toxin. This toxin consists of at least two poisons—*tetano-lysin* and *tetano-spasmin*; the latter is the poison that causes lockjaw.

The motor nerves have a special affinity for tetanus toxin. As soon as the toxin is produced the adjacent motor nerve-endings at once begin to take it up and transport it to the cord. The lymphatics also absorb much of it and in a short time it appears in the blood, which carries it to all parts of the body, where it is absorbed by the motor nerve-endings which are bathed in the toxin-laden fluid. The nerves supplying the jaws, especially the masseteric, seem to have an exaggerated affinity for the poison, which explains the early trismus. The symptoms are usually earlier and more marked in the limb in which the wound is present, due to the fact that the toxin index is higher there than in other parts of the body. The evidence is decidedly in favor of the view that the toxin produces its effect solely by its absorption by the nerves whose axis-cylinder substance has a specific affinity for the poison; they transport it to the cord and brain through the axis-cylinder substance.

The affinity of the nerves for the toxin and its subsequent binding by them explains why tetanus antitoxin is of very little value after the symptoms have appeared. Antitoxin can, however, neutralize any new toxin that may be formed in cases in which the focus has not been removed.

<sup>a</sup>The Fourth of July, 1903, Casualty List. *Journ. Am. Med. Assn.*, vol. 41, p. 547

The incubation period may be from four or five days to several weeks. If the incubation period is four or five days, death frequently occurs in twenty-four to seventy-two hours. The more prolonged the incubation period is over ten days the better chance there is for recovery. The few cases that do recover are almost invariably those with an incubation period of ten days or more. The mortality of those attacked is from 90 to 95 per cent.

#### TREATMENT OF FOURTH OF JULY WOUNDS.

Physicians often treat blank cartridge and other Fourth of July injuries, unless of a serious character, as trivial, contenting themselves with picking out the plainly seen pieces of wad, powder, etc., and applying a dressing. In a few days the patient returns with symptoms of tetanus and then, when it is too late, antitoxin is given, the wound is thoroughly cleaned out, and perhaps a piece of wad or clothing found in it.

It should be an invariable procedure that all Fourth of July wounds be laid fully open under local or, preferably, general anaesthesia and all foreign material and necrotic or badly injured tissue removed, as the presence of blood clots and necrotic tissue favor anaerobic conditions, which are essential for the development of the tetanus organism. The use of a constrictor, such as the Esmarch bandage, to prevent hemorrhage during the operation if the wound is on a limb is of much assistance. After the wound has been thoroughly cleaned out it should be swabbed out with strong carbolic acid, at least 25 per cent, followed by a washing with 95 per cent alcohol to prevent further action of the acid. Some surgeons use peroxide of hydrogen instead of carbolic acid. On account of the action of formalin<sup>a</sup> on tetanus toxin I think swabbing out the wound with pure formalin after the thorough surgical cleaning out would be an excellent procedure; the pain from the use of formalin soon passes off, and the necrosis caused by it is slight. I hope it will be given a trial by surgeons in Fourth of July wounds.

After cauterization, by whatever method used, the wound should be thoroughly washed out with a 1:1,000 or 1:2,000 solution of bichloride of mercury and packed with gauze soaked in a saturated solution of salicylic or boric acid and a large wet dressing of the same solution applied. In no case should the wound be closed, but it should be allowed to heal by granulation. The dressing and packing should be renewed every day.

#### TETANUS ANTITOXIN.

Immediately after the wound has been dressed as above at least 1,500 units of tetanus antitoxin should be given. This may be given in the loose tissue of the abdomen, in the buttocks, between the scapulae, or in any convenient part of the body. It is best to administer the antitoxin while the patient is in the recumbent position. The administration of antitoxin is the most important part of the whole treatment.

<sup>a</sup> Anderson, John F.: The antiseptic and germicidal properties of solutions of formaldehyde and their action upon toxins. Hygienic Laboratory Bulletin No. 39, 1907.

The following table, taken from an article by Scherck,<sup>a</sup> of St. Louis, shows in a most convincing way the great value of tetanus antitoxin as a prophylactic in Fourth of July wounds:

*Cases of Fourth of July wounds treated in St. Louis city dispensaries.*

Year.	Cases of wounds treated.	Antitetanic serum used.	Deaths from tetanus.
1903.....	56	None.....	16
1904.....	37	Yes.....	0
1905.....	84	Yes.....	0
1906.....	170	Yes.....	0

It will be seen that in 1903, when no tetanus antitoxin was used, 16 or about 30 per cent of the 56 cases of Fourth of July injuries treated died from tetanus; in 1906, 170 cases of similar injuries were treated, antitoxin being used, *without a single death from tetanus.*

#### RÉSUMÉ OF TREATMENT.

The procedure reported in the same article by Scherck for the surgical handling of Fourth of July injuries seems to be so satisfactory that I quote it verbatim:

1. To incise freely every wound.
  2. Carefully and thoroughly to remove from the wound every particle of foreign matter.
  3. To cauterize the wound thoroughly with 25 per cent carbolic acid.
  4. To apply loosely a wet pack of 2.5 per cent carbolic acid.
  5. To give a full dose of antitetanic serum.
- The patient was required to return every day for observation and dressing of the wound.

If the various municipalities would pass laws restricting the sale of firearms and ammunition to minors, absolutely prohibit the sale of blank cartridges, toy cannons, and giant fire crackers, and through the lay press educate the people to the great danger of Fourth of July wounds and the importance of thorough surgical treatment and the prophylactic use of *tetanus antitoxin*, many valuable lives would be saved to the nation.

#### FEDERAL CONTROL OF TETANUS ANTITOXIN.

An act of Congress approved July 1, 1902, provides that establishments engaged in the manufacture and interstate sale of viruses, serums, toxins, and analogous products shall be licensed by the Secretary of the Treasury upon the recommendation of the Surgeon-General of the United States Public Health and Marine-Hospital Service, after inspection by an officer of that service of the stables, laboratories, and methods used and an examination of their products in the Hygienic Laboratory. Samples of the products put on sale by licensed manufacturers are bought at frequent intervals on the open market and examined in the Hygienic Laboratory for purity and potency. Up to October 25, 1907, there was no official standard for testing tetanus antitoxin in the United States; each manufacturer had his own arbitrary method of

<sup>a</sup>Scherck, H. J.: Antitetanic serum in Fourth of July injuries. Jour. Am. Med. Assn., vol. 47, p. 500.

determining the potency of his products. On that date, however, an American unit was officially promulgated by the Secretary of the Treasury on the recommendation of the Surgeon-General of the Public Health and Marine-Hospital Service.

This American standard<sup>a</sup> is the result of several years' work in the Hygienic Laboratory and commends itself on account of its simplicity, directness, and accuracy. The unit is defined as "ten times the least quantity of antitetanic serum necessary to save the life of a 350-gram guinea pig for ninety-six hours against the official test dose of a standard test toxin furnished by the Hygienic Laboratory of the Public Health and Marine-Hospital Service." The Society of American Bacteriologists in December, 1906, adopted a resolution in regard to the standardization of tetanus antitoxin and decided that the minimal immunizing dose for a case of possible tetanus infection should be 1,500 units.

The great need of an official standard for tetanus antitoxin was shown by the examination of samples of serum sold in the United States. It was found, before the adoption of the American unit, that the serums varied extravagantly in unit strength claimed and the actual number of units they contained. Since the unit has been established there has been uniformity in the product and a decided increase in potency. When a physician now buys a package of tetanus antitoxin in the United States he can rest assured that it contains a potent product and the number of units indicated on the label.

*Report from Seattle, Wash.—Plague laboratory work, month of May, 1908—Summary of plague situation.*

Assistant Surgeon Chapin reports, June 1, through Passed Assistant Surgeon Glover:

The following is a report of the work done in the Plague Laboratory during the month of May, 1908:

Four thousand six hundred and eighty rats were delivered at the laboratory, of which 4,520 were submitted to post-mortem examination. No plague-infected rats were found. A summary of the plague situation to date comprises 3 human cases and 11 plague-infected rats. The last human case was discovered October 25, died October 30, and was verified December 7, 1907. The last plague-infected rat was delivered at the laboratory April 30 and verified May 4, 1908.

STATISTICAL REPORTS OF MORBIDITY AND MORTALITY, STATES AND CITIES  
OF THE UNITED STATES—UNTABULATED.

CALIFORNIA—*San Diego*. Month of May, 1908. Estimated population, 40,000. Total number of deaths, 45, including 5 from tuberculosis. Cases: Measles 7, smallpox 3, and scarlet fever 2.

*Stockton*.—Month of April, 1908. Estimated population, 23,000. Total number of deaths, 18, including 4 from tuberculosis. Cases: Tuberculosis 4, diphtheria 4, and scarlet fever 11.

Month of May, 1908. Total number of deaths, 19, including diphtheria 1, scarlet fever 1, and 1 from tuberculosis. Cases: Diphtheria 1, scarlet fever 13, and tuberculosis 1.

CONNECTICUT—*Stamford*.—Month of May, 1908. Estimated population, 22,000. Number of deaths not reported. Cases: Diphtheria 1, scarlet fever 2, enteric fever 2, measles 2, and whooping cough 1.

FLORIDA—*Pensacola*.—Month of May, 1908. Estimated population, 22,256. Total number of deaths, 37, including enteric fever 3 and 2 from tuberculosis. Cases of contagious diseases not reported.

ILLINOIS—*Alton*.—Month of May, 1908. Estimated population, 22,000. Total number of deaths, 15, including 3 from tuberculosis.

MINNESOTA—*Stillwater*.—Month of May, 1908. Census population, 12,318. Total number of deaths, 9, including 1 from diphtheria. Cases: Diphtheria 2, and scarlet fever 1.

NEW YORK—*Rome*.—Month of May, 1908. Estimated population, 18,500. Total number of deaths, 43, including 6 from tuberculosis. Cases: Tuberculosis 6, scarlet fever 1, and measles 67.

*Saratoga Springs*.—Month of May, 1908. Estimated population, 11,822. Total number of deaths, 14. Cases: Measles 3, and scarlet fever 1.

OHIO—*Canton*.—Month of May, 1908. Estimated population, 40,000. Total number of deaths not reported. Two deaths from tuberculosis and 1 from scarlet fever. Cases: Diphtheria 3, scarlet fever 6, smallpox 3, and tuberculosis 2.

PENNSYLVANIA—*South Bethlehem*.—Month of May, 1908. Estimated population, 18,000. Total number of deaths, 21. Cases: Measles 11, enteric fever 3, diphtheria 2, and scarlet fever 1.

*Wilkesburg*.—Seventeen days ended June 7, 1908. Estimated population 20,000. Total number of deaths 9. Cases: Measles 11, diphtheria 1, and enteric fever 1.

SOUTH CAROLINA—*Charleston*.—Month of May, 1908. Estimated population, 65,000. Total number of deaths, 166, including enteric fever 4, and tuberculosis 17. Cases: Diphtheria 1, enteric fever 16.

UTAH—*Salt Lake City*.—Month of May, 1908. Estimated population, 85,000. Total number of deaths from all causes, 102, including enteric fever 1, measles 1, scarlet fever 3, and 6 from tuberculosis. Cases: Diphtheria 4, whooping cough 8, measles 15, scarlet fever 52, smallpox 5, tuberculosis 1, and enteric fever 4.

WISCONSIN.—Quarter ended March 31, 1908. Estimated population, 2,228,969. Total number of deaths was 7,526, corresponding to an annual death rate of 12.93 per 1,000 of the population. Contagious diseases reported were as follows: Diphtheria, 461 cases, 52 deaths; enteric fever, 142 cases, 17 deaths; measles, 557 cases, 5 deaths; scarlet fever, 365 cases, 14 deaths; smallpox, 566 cases, 1 death; whooping cough, 130 cases, 7 deaths; phthisis pulmonalis, 217 cases, 170 deaths.

*Smallpox in the United States as reported to the Surgeon-General, Public Health and Marine-Hospital Service, December 28, 1907, to June 19, 1908.*

For reports received from June 28, 1907, to December 27, 1907, see PUBLIC HEALTH REPORTS for December 27, 1907.

## FOREIGN AND INSULAR.

### BARBADOS.

#### *Report from Bridgetown—Inspection of vessels.*

Acting Assistant Surgeon Urquhart reports:

Week ended May 30. Bills of health issued to 9 steamships bound for ports of the United States having 495 persons in their crews and carrying 243 passengers. Two of these steamships were for United States ports, via the Spanish Main, and 2 were fumigated. The sanitary conditions of the port and island remain good, no quarantinable diseases being reported for the week.

### BRITISH HONDURAS.

#### *Report from Belize, fruit port.*

Acting Assistant Surgeon Mengis reports:

Week ended June 4. Present officially estimated population, 10,000. General sanitary condition of this port and the surrounding country during the week, very good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 29	Belize .....	Mobile .....	18	1	4
29	Corinto .....	New Orleans .....	29	4	15

### CHILE.

#### *Report from Valparaiso—Plague situation.*

Consul Winslow reports, April 29:

The Venezuelan superior council of hygiene has sent to the minister of the interior of Venezuela a report, of which the following is a part:

The first cases of bubonic plague at Valparaiso occurred in December of last year, and from that date to April 4 there were 32 cases and 16 deaths. Three new cases have been reported since April 4.

The bacteriological investigation carried out by the microscopical and bacteriological section of the Institute of Hygiene, with material collected by the same sanitary inspector from one of the cases mentioned above, gave positive results. This proves bacteriologically the existence of a new epidemic of bubonic plague in Valparaiso.

In a single shed at the back of the lazaretto, where there are isolated more than 100 cases of tuberculosis, the persons infected with bubonic

plague are collected and attended by nurses in common with the rest of the patients. The men attacked by plague are placed in a section of the lazaretto, separated from the neighboring department by a wall with an open door, through which there is constant communication. It is the same in the women's section, where the nurses are in constant communication with the rest of the staff. There are contagious cases of plague in the hospital among patients received suffering from other diseases.

This suffices to show that there is no real prophylaxis exercised in treating the disease in Valparaiso, and that in consequence the epidemic continues to make havoc in the population. It is also sufficient, in the judgment of the superior council of public hygiene, to cause the State to take efficient measures for the safeguarding of Valparaiso and the other cities of the Republic that are menaced by plague. The council recommends the organization of a special sanitary service that will have the power in such cases to impose the police sanitary laws.

#### COSTA RICA.

##### *Report from Limon, fruit port.*

Acting Assistant Surgeon Goodman reports:

Week ended May 30. Estimated population, 6,000. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 24	Esparta .....	Boston .....	44	6	0
25	Prinz Joachim .....	New York .....	132	176	2
25	Prinz Eitel Frederic .....	do .....	107	0	4
26	Pactare .....	do .....	54	2	0
27	H. T. Inge .....	New Orleans .....	33	0	21
28	Origen .....	do .....	24	1	0
29	Zent .....	New York .....	52	9	0
30	Bluefields .....	New Orleans .....	24	1	0
30	Hispania .....	Mobile .....	20	0	0

Four bills of health for Panaman ports were visced and 23 certificates were issued to passengers going to Colon.

#### CUBA.

*Report from Cienfuegos—Inspection of vessels—One case of leprosy—Cuban ports closed against Venezuela with exception of Mariel—Rainfall—Oiling of cisterns.*

Acting Assistant Surgeon Marsillan reports June 8:

*Week ended June 6.*

Vessels inspected and bills of health issued ..... 2  
Members of crews inspected ..... 55

There is no quarantinable disease here.

One case of leprosy was reported within the district and transferred to San Lazaro Hospital at Santa Clara.

In an order dated May 22, made on recommendation of the national board of health of Cuba, the governor of Cuba orders all Cuban ports closed against traffic with Venezuela, except the port of Mariel. Vessels arriving from Colombia will be subjected to a strict inspection.

Drought has been broken by some good rainfalls, but not yet in the necessary abundance.

Cisterns and other similar water reservoirs are oiled under the direction of the local health office to destroy mosquitoes.

*Report from Habana—Inspection and fumigation of vessels—Heavy rainfall throughout the island—Enteric fever at Camaguey.*

Passed Assistant Surgeon Amesse reports, June 8:

*Week ended June 6.*

Vessels inspected and bills of health issued .....	21
Vessels not inspected and bills of health issued .....	7
Members of crews of outgoing vessels inspected .....	747
Members of crews of outgoing vessels not inspected .....	316
Passengers of outgoing vessels inspected .....	604
Passengers of outgoing vessels not inspected .....	207
Certificates of immunity to yellow fever issued .....	40
Certificates issued to passengers bound for New York .....	169
Certificates issued to passengers bound for southern ports .....	193
Certificates of vaccination issued for Colon .....	82
Vessels fumigated prior to sailing .....	7

Torrential rains have been reported during the week from every district in the island.

Enteric fever has reached considerable proportions at Camaguey, following pollution of the water supply with infectious material, washed in by recent rains.

The sanitary condition of Habana continues satisfactory.

*Report from Matanzas—Inspection of vessels—Quarantine against Venezuela and Colombia.*

Acting Assistant Surgeon Nuñez reports, June 8:

Week ended June 6, 1908. Bills of health issued to 4 vessels clearing for United States ports in good sanitary condition. There were no vessels fumigated. No quarantinable diseases were reported.

The provisional governor of Cuba has issued a decree forbidding all communications of passengers and vessels between Venezuela and Cuban ports, with the exception of Mariel quarantine station, in view of the prevalence of plague in Venezuela. He also directs strict sanitary measures to be observed with passengers and ships originating from the Republic of Colombia, more especially from Carthagena, with which port Cuba has frequent communication.

*Report from Santiago—Yellow fever case at Santiago.*

Acting Assistant Surgeon Wilson reports:

June 11. One case of yellow fever.

## ECUADOR.

*Report from Quito—Improved health conditions at Guayaquil—Plague diminished.*

The following is received from Minister Fox under date of May 16: Official information shows a great improvement in the health conditions in Guayaquil. The number of cases of bubonic plague has been largely reduced.

## GUATEMALA.

*Report from Puerto Barrios, fruit port.*

Acting Assistant Surgeon Wailes reports:

Week ended June 3. Present officially estimated population, 250. General sanitary condition of this port and the surrounding country during the week, good. No quarantinable disease present.

Bills of health issued to the following-named vessel:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
June 4	Mobila .....	New Orleans .....	41	.....	.....	.....

## HAWAII.

*Report from Honolulu—Examination of rats for plague infection.*

Passed Assistant Surgeon Currie reports, May 23, through Chief Quarantine Officer Cofer:

Week ended May 23:

Rats trapped in Honolulu.....	423
Rats found dead in Honolulu .....	1
Total rats destroyed in Honolulu.....	424
Number of rats examined in this laboratory.....	390
Number examined in Hilo under supervision of this laboratory.....	118
Total number of rats examined bacteriologically.....	509

Classification of rats examined:

Mus decumanus .....	93
Mus rattus .....	200
Mus alexandrinus .....	10
Mus musculus.....	87

Average number traps set daily .....	390
Glucose boards placed .....	485
Mice caught on glucose boards .....	7
Rats caught on glucose boards.....	6
	2

## HONDURAS.

*Report from Ceiba, fruit port—Mosquito destruction.*

Acting Assistant Surgeon Jumel reports:

Week ended June 2. Present officially estimated population, 6,500. General sanitary condition of this port and the surrounding country

during the week, good. The local crusade against mosquitoes continues. The authorities are now engaged in pruning the heavy foliage of trees and shrubs throughout the town.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
May 29	Joseph Vaccaro .....	31	2	0	0
June 1	Colombia .....	19	0	1	0

*Sanitary conditions at Cacaopanda, Bonitillo, Bonita, and El Porvenir, in vicinity of Ceiba.*

Cacaopanda, situated on the beach about 4 miles from Ceiba and built exclusively of manaca or palm-thatch houses, is a small settlement of about 100 Caribs, whose principal industry appears to be fishing and the marketing of that product in and around Ceiba. Strong northeast trade winds are daily occurrences, and this, combined with the absence of fresh water in the proximity, accounts for the presence of relatively few mosquitoes. The health and sanitary conditions are good. The houses are far apart, and the only street in the settlement is kept very clean. Very few diseases exist, and were it not for the free and uninterrupted daily communication with Ceiba very little if any importance would attach to this place from a quarantine view point.

Bonitillo is a small village with an estimated population of about 300 natives and Caribs; situated immediately along the beach, and about 6 miles from Ceiba, with which it has daily communication by means of a trail along the beach, numerous sailing vessels, and the recently constructed railroad. The sanitary conditions are bad. With the exception of one house all domiciles are of the manaca type, teeming with vermin, and far from being in a habitable condition. No quarantinable diseases exist, but malarial fevers are very common and of frequent occurrence. Mosquitoes, especially *Culex* and *Anopheles*, are numerous.

Bonita, built upon a silted estuary originally formed by three small rivers, is a settlement of about 50 foreigners. Situated near the beach and about 6½ miles from Ceiba, with which it enjoys frequent communication by rail and other means, this place is not an unimportant distributing point for bananas and cocoanuts. The sanitary conditions of the settlement proper are good, but conditions existing in the immediate environment are very bad. Malarial fevers are occasionally observed. All residences are effectually screened. The settlement is surrounded practically upon all sides by extensive swamps in an advanced degree of stagnation.

El Porvenir, 8 miles from Ceiba and situated along the beach near the mouth of the Juan Lopez River, has a population of about 2,000, natives, Caribs, and foreigners. Being one of the largest and most important distributing points for bananas and cocoanuts on the coast, all fruit steamers call there for cargo. The town is built upon sandy soil with a substratum of coarse gravel, which obviates in a measure the necessity for surface drainage, which does not exist. In general,

the houses are light frame structures with many openings, not one of which, however, is screened. The health conditions are fair. *Anopheles* are numerous and are continually present. There are no quarantinable diseases in El Porvenir.

*Report from Puerto Cortez, fruit port—Stegomyia calopus present.*

Acting Assistant Surgeon Ames reports: Week ended May 30. Present officially estimated population, about 2,400. General sanitary condition of this port and the surrounding country, very good. *Stegomyia calopus* present.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 25	Helen .....	Mobile .....	22	5	0
27	Mercator .....	New Orleans .....	18	0	0
28	Corinto .....	.....do. ....	29	2	0
28	Bodo .....	Mobile .....	17	2	0
28	Columbia .....	.....do. ....	19	0	0

Temperature taken of all persons on above-named vessels on day of sailing.

*Report from Tela, fruit port.*

Acting Assistant Surgeon Roe reports:

Week ended May 30. Present officially estimated population, about 1,250. General sanitary condition of this port and the surrounding country during the week, good.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 28	Jos. Vaccaro .....	New Orleans .....	31	0	0
30	Columbia .....	Mobile .....	19	1	0

INDIA.

*Reports from Calcutta—Transactions of Service—Cholera, plague, and smallpox—Plague in India and Bengal.*

Acting Assistant Surgeon Allan reports, May 14 and 21:

During the week ended May 16 a bill of health was issued to the steamship *Kazembe*, bound for Boston and New York, with a total crew of 67 and 48 passengers for Colombo. The usual precautions were taken—the holds fumigated, rat guards placed on the wharf lines, and the Asiatics' effects disinfected.

Week ended May 2. Two hundred and thirty deaths from cholera, 73 from plague, and 15 from smallpox in Calcutta.

In Bengal, week ended May 2, 368 cases and 336 deaths from plague.

In India, during the same period, 6,803 cases and 5,579 deaths from plague.

During the week ended May 9 there were 164 deaths from cholera, 84 from plague, and 16 from smallpox in Calcutta. In Bengal during the week ended May 2 there were 224 cases of plague with 192 deaths. In India during the same period there were 5,685 cases of plague with 4,564 deaths.

## ITALY.

*Report from Naples—Inspection of vessels—Emigrants recommended for rejection—Smallpox in Italy.*

Assistant Surgeon Wollenberg reports, May 25:

*Vessels inspected at Naples week ended May 23.*

Date.	Name of ship.	Destination.	Steerage passengers inspected and passed.	Pieces of baggage inspected and passed.	Pieces of baggage disinfect.
May 19	Ancona .....	New York .....	201	65	480

Week ended May 24. *Smallpox*.—Cases: Taggia (Porto Maurizio) 4, Trezzo sull'Adda 1, Olgiate Olona (Milan) 3, Mariano al Brembo 7, Osio 1, Sforzatico (Bergamo) 3, Malalbergo (Bologna) 1, Aquila 1, Avellino 1, Montaro Inferiore 1, Pratola Serra 1, Bagnoli Topino (Avellino) 1, Monte S. Angelo 1, Ortanova (Foggia) 2, Andria 4, Bartetta 1, Molfetta (Bari) 1, Barile 1, Palazzo San Gervasio (Potenza) 1, Palermo 2, Livata 2, Porto Empedocle (Girgenti) 1.

## JAPAN.

*Report from Yokohama—Emigrants recommended for rejection.*

Passed Assistant Surgeon Cumming reports:

Number of emigrants per steamship *Nippon Maru* recommended May 20 for rejection: For Honolulu 3; advised to wait 8. For San Francisco, advised to wait 8.

*Reports from Kobe—Inspection of vessels—Examination of emigrants—Localities from which emigration is drawn—Plague and smallpox at Osaka and Nara.*

Acting Assistant Surgeon Slade reports, May 19.

During the week ended May 16, 5 supplemental bills of health were granted to 5 steamships and 1 original bill of health was granted 1 steamship; 346 members of crews and 314 steerage passengers were inspected; 36 members of crews and 143 steerage passengers were bathed and had their effects disinfected by steam. The number of pieces of baggage steamed was 475; the number of pieces of bedding similarly treated, 294. Manifests were viséed for 26,246 pieces of freight, amounting to 2,331 tons.

Emigrants were examined as follows:

Steamship *Nippon Maru* for Honolulu, passed 137; recommended for rejection, 74; steamship *Nippon Maru* for San Francisco, passed 7; recommended for rejection 5.

The report from Osaka for the week ended May 9 shows 2 cases of plague with 2 deaths and 52 cases of smallpox with 29 deaths.

Plague broke out early this month at Nara, about 22 miles northeast of Osaka; from the last report, May 14, there were 7 cases.

Between the islands of Kuishu and Formosa there are a number of islands named the Luchus. From this section of the Empire of Japan an ever-increasing number of emigrants, bound chiefly for Honolulu, but some also for Seattle, is recruited. They are generally healthy except for scabies, from which disease about 10 per cent have to be rejected. It is extremely rare to find any suffering from trachoma. Emigrants who leave this port are strong and healthy. It is rare that any have to be refused except for trachoma, but for this disease alone about 33½ per cent are rejected. The Japanese oculists understand well the treatment, both surgical and medical, of this disease, and the people are becoming more alive to its importance. Great numbers of emigrants come from Hiroshima and Yamaguchi districts, which are located about 180 miles south of Kobe.

*Statistics of smallpox at Kobe during the six years ended December 31, 1907.*

Year.	Disease.	Cases.	Deaths.	Date of first outbreak.	Date of last case.

## MEXICO.

*Report from Salina Cruz—Inspection and fumigation of vessel.*

Acting Assistant Surgeon McPherson reports, June 1:

During the period May 16 to 31, inclusive, one steamship cleared from this port for the United States, the steamship *Arizonan*, which left May 25 for San Diego, Cal., and was fumigated throughout while in the roadstead outside the harbor.

*Reports from Veracruz—Inspection and fumigation of vessels—Few mosquitoes—Further relative to yellow fever cases on bark Lembit at Laguna.*

Acting Assistant Surgeon Jacobs reports, May 31 and June 7:

Week ended May 30, no quarantinable diseases were reported.

There are few mosquitoes to be found, as the rainy season has not yet begun.

During the week 6 vessels were inspected and fumigated, and 5 inspected only.

Three cases of yellow fever, previously reported, occurred on board the Russian bark *Lembit* at Laguna de Terminos. Of these cases 2 ended fatally (the captain and quartermaster of the vessel), and the remaining case is isolated and screened. A delegate of the Federal board has been sent to make further investigations.

Laguna is the name given to this port because it is at the outlet of a large lagoon. It is situated in the State of Campeche, just across the border from the State of Vera Cruz. It has no railroad, and infection of the port could occur only by vessels.

Week ended June 6. Four vessels inspected and 4 inspected and fumigated.

The health and sanitary conditions of Vera Cruz and surrounding country are good.

No quarantinable disease has been reported during the week.

Mosquitoes are present, but not numerous.

A telegram was received from the delegate of the national board of health to-day, stating that there was another death from yellow fever with one confirmed case at Laguna. The cases are isolated and screened. This makes 3 deaths in all since yellow fever was first reported. There is little communication with Laguna, and very few nonimmunes reside there.

Vessels from that port are being fumigated and passengers are under surveillance if they remain in this vicinity. If they go into the interior, a report is sent to the place, where they are to stay until the six days have expired.

## NICARAGUA.

*Report from Bluefields, fruit port.*

Acting Assistant Surgeon Layton reports:

Week ended May 26. Present officially estimated population, 2,500. General sanitary condition of this port and the surrounding country during the week, good. Few mosquitoes.

## Bill of health issued to the following-named vessel:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 22	Dictator .....	New Orleans .....	18	4	0

## PANAMA.

*Report from Bocas del Toro, fruit port.*

Acting Assistant Surgeon Osterhout reports as follows:

Week ended May 26. General sanitary condition of this port and the surrounding country during the week, good. Present officially estimated population, 4,954.

Bills of health issued to the following-named vessels:

Date.	Vessel.	Destination.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.
May 20	Mount Vernon .....	Mobile .....	20	0	0
21	Fort Morgan .....	do .....	23	2	0
22	Frutero via Santa Marta....	New York .....	25	0	0
24	Chickahominy .....	New Orleans .....	46	2	0

## PERU.

*Reports from Callao—Inspection and fumigation of vessels—Status of plague in Peru—Smallpox in Lima.*

Acting Assistant Surgeon Gutierrez reports, May 13 and 20:

Week ended May 9. Two vessels were dispatched, with an aggregate personnel of 130 in the crew, 81 cabin and 58 steerage passengers. Both were fumigated.

The following is the last report on plague in Peru received from the Director de Salubridad:

Locality.	Cases April 22.	New.	Recovered.	Died.	Remaining May 4.
Lima (city).....	11	6 }	6	4	8
Lima (district) .....		1 }			
Callao .....	2	4		2	4
Chosica .....	2				2
Santa Eulalia (Huarochiri).....	1		1		
Trujillo (city).....	32	5 }	23	6	37
Trujillo (district).....		9 }			
Ferreñafe .....	3	1	2		2
Eten (city) .....	4	6	6	3	1
Catacaos .....	1		1		
Mollendo .....	2	1	1		2
Monsefu .....	1				1
Chiclayo .....	4	5		4	5
Niños (Hualgayoc).....	9	1?	8		5
Chepen (Pucasmayo).....	3				3
Total .....	95	39?	48	19	70

One of the cases reported among those from Trujillo was found in Salaverry. Two new cases of smallpox have occurred in Lima.

Week ended May 16. Two steamships and two American schooners were dispatched, with an aggregate personnel of 188 in the crews, and 90 cabin and 51 steerage passengers.

The following is the last report on plague in Peru received from the Director de Salubridad:

Locality.	Cases May 5.	New.	Recovered.	Died.	Remaining May 11.
Lima (city).....	8	2	1	1	9
Lima (district).....		1			
Callao.....	4		1		3
Chosica.....	2		2		
Trujillo (city).....	37		11		28

Mollendo.....	2	1			3
Monsefu.....	1				1
Chiclayo.....	5		4		1
Chepen.....	3				3
Niepos (Hualgayoc).....	5		3		2

One case of plague occurred in Callao yesterday and two cases to-day. Both cases have been removed to the lazaretto.

Two cases of smallpox remain isolated in the hospital, and no new case was reported in Lima last week.

#### ST. LUCIA ISLAND.

*Report from Castries—Inspection of vessels—No quarantinable diseases.*

Acting Assistant Surgeon Maylie reports, May 26:

Week ended May 23. Two steamships were fumigated and given bills of health. No quarantinable diseases are present here.

#### SIERRA LEONE.

*Report from Sierra Leone—Quarantine on account of plague on British Gold Coast suspended.*

Consul Yerby reports May 4:

At Akkra, March 8, 6 cases of plague with 3 deaths were reported for the week ended March 7. March 15, 4 cases were reported. Eight deaths were reported near Adjumatto, Saltpond district, up to March 9. March 16, 1 case was reported at Cape Coast, and another case March 19. March 23, 3 cases were reported at Akkra, with 5 deaths. April 2, 1 case was reported at Akkra, and another case and 1 death on April 6. April 12, 2 more cases and 2 deaths were reported.

Since April 18 no more cases of plague have been discovered and clean bills of health are being issued to all vessels calling at Akkra and other Gold Coast ports.

Quarantine was lifted at all Sierra Leone ports April 20.

## VENEZUELA.

*Reports from Caracas—Plague at Caracas and La Guaira.*

The following information is received from the American chargé d'affaires, through the Department of State, under dates of June 4 and 5:

June 4.—La Guaira consulate reports: May 30, 1 case; May 31, 5 cases; June 1, 2 cases. Four of the foregoing cases are known to have been fatal. There was 1 death from plague at Caracas May 30.

June 5.—Plague situation worse in Caracas, 2 cases June 4; 1 case June 5; 1 death. The Government to date has taken no special measures to combat the disease.

## FOREIGN AND INSULAR STATISTICAL REPORTS OF COUNTRIES AND CITIES—UNTABULATED.

AFRICA—*Lourenço Marquez*.—Month of April, 1908. Estimated population, 10,000. Total number of deaths, 42, including beriberi 1, leprosy 1, smallpox 1, and 11 from tuberculosis.

*Orange River Colony, Bloemfontein*.—Month of March, 1908. Estimated population, 12,000. Total number of deaths, 11, including 1 from tuberculosis. Month of April, 1908. Total number of deaths, 7, including 2 from tuberculosis.

*Zanzibar*.—Month of April, 1908. Estimated population, 75,000. Total number of deaths, 112, including 18 from tuberculosis.

BRAZIL—*Sao Paulo, Santos, and Campinas*.—Week ended May 3, 1908. Estimated population, 300,000. Total number of deaths, 161, including scarlet fever 2, leprosy 1, measles 1, and 12 from tuberculosis.

BORNEO—*Sandakan*.—Period from January 1 to March 31, 1908. Estimated population, 10,495. Total number of deaths, 78, including beriberi 18 and 4 from phthisis pulmonalis.

FRANCE—*Calais*.—Month of May, 1908. Estimated population, 70,000. Total number of deaths, 117, including 27 from tuberculosis.

*Nice*.—Month of April, 1908. Estimated population, 150,881. Total number of deaths, 254, including diphtheria 1, enteric fever 2, measles 13, scarlet fever 3, whooping cough 2, and 33 from tuberculosis.

GIBRALTAR.—Two weeks ended May 31, 1908. Estimated population, 36,830. Total number of deaths, 11.

GREAT BRITAIN—*England and Wales*.—The deaths registered in 76 great towns in England and Wales during the week ended May 23, 1908, correspond to an annual rate of 13.2 per 1,000 population, which is estimated at 16,234,952.

*London*.—One thousand one hundred and fifty-three deaths were registered during the week, including measles 35, scarlet fever 8, diphtheria 6, whooping cough 23, enteric fever 2, tuberculosis 153, and 9 from diarrhea. The deaths from all causes correspond to an annual

rate of 12.5 per 1,000. In Greater London 1,604 deaths were registered. In the "outer ring" the deaths included 3 from measles, 1 from scarlet fever, 5 from diphtheria, 1 from smallpox, and 7 from whooping cough.

*Ireland.*—The average annual death rate represented by the deaths registered during the week ended May 23, 1908, in the 21 principal town districts of Ireland was 18.4 per 1,000 of the population, which is estimated at 1,131,959. The lowest rate was recorded in Galway, viz, 3.9, and the highest in Armagh, viz, 41.2 per 1,000.

*Scotland.*—The deaths registered in 8 principal towns during the week ended May 23, 1908, correspond to an annual rate of 15.4 per 1,000 of the population, which is estimated at 1,839,038. The highest rate of mortality was recorded in Dundee, viz, 19.5, and the lowest in Paisley, viz, 12.1 per 1,000. The aggregate number of deaths registered from all causes was 542, including diphtheria 2, measles 9, scarlet fever 6, enteric fever 2, and 11 from whooping cough.

*ITALY—Genoa.*—Month of April, 1908. Estimated population, 279,163. Total number of deaths, 446, including diphtheria 2, enteric fever 3, and 52 from tuberculosis.

*MALTA.*—Three weeks ended May 23, 1908. Estimated population, 206,690. Total number of deaths, 291, including diphtheria 1, enteric fever 2, measles 8, and 15 from tuberculosis.

*SWITZERLAND.*—Week ended May 16, 1908. Reports from 18 cities, having an aggregate population of 876,946, show as follows: Total number of deaths, 307, including diphtheria 2, measles 1, scarlet fever 1, whooping cough 1, and 67 from tuberculosis.

*WEST INDIES—Curaçao.*—Two weeks ended May 29, 1908. Estimated population, 31,600. Total number of deaths, 10. No deaths from contagious diseases reported.

*St. Thomas.*—Three months ended March 31, 1908. Estimated population, 11,002. Total number of deaths, 98, including enteric fever 1, diphtheria 1, and 11 from phthisis pulmonalis.

*Cholera, yellow fever, plague, and smallpox reported from December 28, 1907, to June 19, 1908.*

[Reports received by the Surgeon-General, Public Health and Marine-Hospital Service, from American consuls, through the Department of State and from other sources.]

[For reports received from June 28, 1907, to December 27, 1907, see PUBLIC HEALTH REPORTS for December 27, 1907.]

[NOTE.—In accordance with custom, the tables of epidemic diseases are terminated semiannually and new tables begun.]
